

II yr. B.com (computers)

Business statistics.

—: UNIT - I :-

- 1) Define regression? explain importance & limitations of regression?
- 2) Difference between correlation & Regression?
- 3) Explain the types of Regression?
- 4) Problems on different types of regression analysis?

—: UNIT - II :-

- 1) Define Index number? explain the importance of Index numbers?
- 2) Explain the problems in construction of Index number?
- 3) explain limitations of Index numbers.
- 4) Problems on different types Index numbers?
- 5) Explain the Test of consistency?

—: UNIT - 3 :-

- 1) Define time series? explain the characteristics & objectives of Time series?
- 2) Explain components of time series?
- 3) Problems on different types of time series.

UNIT - V (~~sets theory~~)

- 1) Define sets ? explain the types of sets?
- 2) problems on sets - theory.
- 3) explain permutations & combinations.
- 4) problems on different types of permutations & combinations?
- 5) Define probability explain the basic concepts & in probability?
- 6) problems on different types of probability?

→ Unit - V ←

- 1) Different types of probability distributions?
- 2) Explain the binomial distribution?
- 3) Different types of probability distributions & problems?
- 4) Explain normal distribution ? explain properties of normal distribution?
